Date : 28 & 29 Oct 2026 (Wed & Thu)
Venue : Dorsett Grand Subang Hotel,
Selangor

2 Days Program

BASIC ELECTRICAL KNOWLEDGE TRAINING

OBJECTIVES OF THIS PROGRAM

To provide participants on:

1. Basic principle of electrical system
2. Electrical terminology , symbol and units
3. Electrical circuit series and parallel
4. Understanding of electrical machine concept design
5. Understanding of basic operation of electrical wiring system for 1 phase and 3 Phase
6. Application of Digital Multi Meter , Test Pen and Insulation Tester
7. Electrical component specification and basic function
8. Safety precaution on electrical system
9. Identify component part no
10. Generate basic electrical wiring project
11. Voltage measurement
12. Identify status of battery , Bulb and Solid State Relay

OVERVIEW

Most of the machine in manufacturing industry using electrical system to control and generates desire output based on production process. The Technician must have basic knowledge and understanding of electrical system to perform daily task assign by Supervisor or Manager.

To ensure effectiveness of production output and minimize machine breakdown delay time, the technician must be able to assist senior technician or engineer by monitoring operation of electrical system. He/she will report to senior technician or engineer if machine in fault conditions and be able to response the problems as" first line repair technician".

- This training suitable for:
- Maintenance Department
- Production Department
- Service Department

COURSE CONTENT

DAY 1

Module Contents	Time
Opening and Introduce Session	9.00 - 9.15
Basic electrical fundamentals • What is electricity? • Electrical Terminology • Electrical Symbol • Unit of Electrical Measurement	9.15 - 10.30
Coffee Break	10.30 - 10.45
Electrical Circuit • Series and Parallel Circuit • Ohms Law Calculation	10.45 - 11.45
Introduction to basic electrical machine design • Power Device / Section • Control Device / Section • Output Device / Section	11.45 - 13.00
Lunch & Prayer	13.00 - 14.00
Electrical diagram and basic operation • Single Phase • 3 Phase	14.00 - 15.00
Coffee Break	15.00 - 15.15
Practical 1 Application of Test Equipment Digital Multi meter • Measurement of Voltage • Measurement of Current • Continuity Test /Short /open test • Resistance Test • Capacitance Test Test Pen • Current Detector Insulation Tester • Insulation Resistance of conductor • Insulation Resistance of 3 Pin power cable • Insulation Resistance of equipment earthing system	15.30 - 17.00
Question & Answer	
End of Day 1	

COURSE CONTENT

DAY 2

Module Contents	Time
Review	9.00 - 9.30
Electrical Component specification and basic function - Fuses - Main Circuit Braker - Magnetic contactor - AC Relay - DC Relay - Solid state Relay (SSR)	9.30 - 10.30
Coffee Break	10.30 - 10.45
Electrical Component specification and basic function - Switching Mode Power Supply - Programmable Logic Controller –PLC Unit - Inverter motor - Lamp - Heater Assembly - Single Phase Motor 3 Phase Motor	10.45 - 12.00
Safety Precaution on Electrical System - Safe working Practices - Safe Isolation & Earthing System - Electrical Shock & action taken	12.00 - 13.00
Lunch & Prayer	13.00 - 14.00
Practical 2 Identify electrical component and Part no for practical session. - Single phase Supply - Fuse - AC Bulb - Solid State Relay - Battery 9V	14.00 - 15.00
Coffee Break	15.00 - 15.15
Practical 3 Based on drawing diagram attached: - Generates electrical wiring according to the diagram - Measure Voltage on DC Circuit and AC Circuit - Identify status of battery ,SSR and AC Bulb	15.15 - 17.00
Question & Answer	
End of Day 2
